

Herewith below refers to the DIY Awning we can offer

## OVERVIEW

Awnings are made from Multiwall polycarbonate sheeting. Awnings can be extended to any length by joining sheets together using common brackets. These awnings protect windows, curtains, and furniture from sun damage and keep doors from swelling. The polycarbonate awnings are a great way to keep your house or offices cool during summer while protecting your doors, windows and people standing underneath it from rain and hail during the winter months.

## FEATURES

### UV RESISTANT

Providing an easy and economic solution from the sun, rain and hail, giving you 99% UV Protection, whilst allowing natural light to pass through.

### DO IT YOURSELF

Put it together yourself using the supplied instruction booklet. An easy 3 step installation process (See below)

### WEATHER RESISTANT

*Suitable for all climates.*

*Awnings are also hail resistant.*

## **DURABLE**

*Provides excellent durability and a sturdy, well made design.*

## **MADE IN SOUTH AFRICA**
